

# 寫程序讓CPU佔用率保持正弦函數

---

導入自 [renren](#)

據說是一道微軟的面試題。如題，寫程序，讓Windows的任務管理器中的性能監視器呈現正弦曲線。

潛心鑽研良久，得代碼： (java)

```
1 public class sincpu {  
2     private static final int cycle=  
1024,tick = 256;  
3     public static void main (String  
[] args) throws InterruptedException {  
4         for(int i = 0;;i++){  
5             work(calcNextSleep(i %  
cycle));  
6             sleep(tick - calcNextSl  
eep(i % cycle));
```

```
7         }
8     }
9
10    private static long calcNextSleep(long i){
11        return (int)(Math.sin((double)i * 2 * Math.PI / cycle) * tick + tick) / 2;
12    }
13
14    private static void sleep (long sleepTime) throws InterruptedException
15    {
16        if(sleepTime < 2)
17            Thread.yield();
18        else
19            Thread.sleep(sleepTime);
20    }
21
22    private static void work (long period) {
23        long start = System.currentTimeMillis();
24        for(;;){
25            Math.sin(1);
26            if(System.currentTimeMillis() - start >= period)
27                break;
28        }
29    }
30 }
```

## 多核CPU上測試時要注意關掉一個CPU：
