

寫程序讓CPU佔用 率保持正弦函數

導入自 renren

據說是一道微軟的面試題。如題，寫程序，讓 Windows 的任務管理器中的性能監視器呈現正弦曲線。

潛心鑽研良久，得代碼： (java)

```
1 public class sincpu {
2     private static final int cycle=
1024,tick = 256;
3     public static void main (String
[] args) throws InterruptedException {
4         for(int i = 0;;i++){
5             work(calcNextSleep(i %
cycle));
6             sleep(tick - calcNextSl
leep(i % cycle));
7         }
8     }
9
10    private static long calcNextSle
ep(long i){
11        return (int)(Math.sin((doub
le)i * 2 * Math.PI / cycle) * tick + t
ick) / 2;
12    }
13
14    private static void sleep (long
sleepTime) throws InterruptedException
15    {
16        if(sleepTime < 2)
17            Thread.yield();
18        else
19            Thread.sleep(sleepTime);
20    }
```

```
21
22     private static void work (long
period) {
23         long start = System.current
TimeMillis();
24         for(;;){
25             Math.sin(1);
26             if(System.currentTimeMi
llis() - start >= period)
27                 break;
28         }
29     }
30 }
```

多核CPU上測試時要注意關掉一個CPU：
