

写程序让CPU占用率保持正弦函数

导入自 renren

据说是一道微软的面试题。如题，写程序，让Windows的任务管理器中的性能监视器呈现正弦曲线。

潜心钻研良久，得代码： (java)

```
1  public class sincpu {
2      private static final int cycle=
1024,tick = 256;
3      public static void main (String
[] args) throws InterruptedException {
4          for(int i = 0;;i++){
5              work(calcNextSleep(i %
cycle));
6              sleep(tick - calcNextSl
leep(i % cycle));
7          }
8      }
9
10     private static long calcNextSle
ep(long i){
11         return (int)(Math.sin((doub
le)i * 2 * Math.PI / cycle) * tick + t
ick) / 2;
12     }
13
14     private static void sleep (long
sleepTime) throws InterruptedException
15     {
16         if(sleepTime < 2)
17             Thread.yield();
18         else
19             Thread.sleep(sleepTime);
20     }
```

```
21
22     private static void work (long
period) {
23         long start = System.current
TimeMillis();
24         for(;;){
25             Math.sin(1);
26             if(System.currentTimeMi
llis() - start >= period)
27                 break;
28         }
29     }
30 }
```

多核CPU上测试时要注意关掉一个CPU：
