

PyRuby

Today I saw a package called PyRuby in Github. The readme says:

PyRuby - Some Ruby for your Python!

PyRuby is a simple way to leverage the power of Ruby to make your Python code more readable and beautiful.

Usage

All you have to do is import the ruby module:

```
import ruby
```

From now on you should be able to write Ruby code within a regular Python module. An example:

```
1.upto(10) { |n| puts n }
```

Even PyPI has listed this as a package.

In the beginning I thought this was again a Ruby implementation by PyPy project. Or at least it use some magic trick to write ruby code directly in Python.

Then I browse into the source code of it.

It contains only one file: `ruby.py`

```

1 # -*- coding: utf-8 -*-
2
3 print("""

```

[illegible]

```

46     """)
47
48     import sys
49     sys.exit(1)
```

Yes, indeed. The idea of using Ruby in Python is totally mad.
