

Write a program to keep CPU usage as sin function

Imported from: renren.

It is said that this is a problem from interview of Microsoft. Write a program, which makes the CPU usage curve in Windows Task Manager shows a Sin function.

The program below is written in java:

```
1 public class sincpu {
2     private static final int cycle=
1024,tick = 256;
3     public static void main (String
[] args) throws InterruptedException {
4         for(int i = 0;;i++){
5             work(calcNextSleep(i %
cycle));
6             sleep(tick - calcNextSl
leep(i % cycle));
7         }
8     }
9
10    private static long calcNextSle
ep(long i){
11        return (int)(Math.sin((doub
le)i * 2 * Math.PI / cycle) * tick + t
ick) / 2;
12    }
13
14    private static void sleep (long
sleepTime) throws InterruptedException
15    {
16        if(sleepTime < 2)
17            Thread.yield();
18        else
19            Thread.sleep(sleepTime);
```

```
20      }
21
22      private static void work (long
period) {
23          long start = System.current
TimeMillis();
24          for(;;){
25              Math.sin(1);
26              if(System.currentTimeMi
llis() - start >= period)
27                  break;
28          }
29      }
30 }
```

Be careful you need to turn off other cores if you have multi-core CPU.
