## Write a program to keep CPU usage as sin funcion

Imported from: renren.

It is said that this is a problem from interview of Microsoft. Write a program, which makes the CPU usage curve in Windows Task Manager shows a Sin function.

The program below is written in java:

```
public class sincpu {
1
       private static final int cycle=
1024.tick = 256:
3
       public static void main (String
[] args) throws InterruptedException {
            for(int i = 0;;i++){
4
                work(calcNextSleep(i %
5
cycle));
                sleep(tick - calcNextSl
6
eep(i % cycle));
7
8
9
10
        private static long calcNextSle
ep(long i){
11
            return (int)(Math.sin((doub
le)i * 2 * Math.PI / cycle) * tick + t
ick) / 2;
12
        }
13
14
        private static void sleep (long
sleepTime) throws InterruptedException
15
        {
16
            if(sleepTime < 2)</pre>
17
                Thread.yield();
            else
18
19
                Thread.sleep(sleepTime);
```

```
20
        }
21
        private static void work (long
22
period) {
23
            long start = System.current
TimeMillis();
24
            for(;;){
25
                Math.sin(1);
26
                 if(System.currentTimeMi
llis() - start >= period)
27
                     break;
28
            }
29
        }
30 }
```

Be careful you need to turn off other cores if you have multi-core CPU.
