写程序让CPU占用 率保持正弦函数

导入自 renren

据说是一道微软的面试题。如题,写程序,让Windows的任务管理器中的性能监视器呈现正弦曲线。

潜心钻研良久,得代码:(java)

```
public class sincpu {
       private static final int cycle=1
024, tick = 256;
     public static void main (String[]
3
args) throws InterruptedException {
            for(int i = 0;;i++){
4
5
                work(calcNextSleep(i % c
ycle));
                sleep(tick - calcNextSle
6
ep(i % cycle));
7
            }
       }
8
9
10
       private static long calcNextSleep
(long i){
            return (int)(Math.sin((double
11
)i * 2 * Math.PI / cycle) * tick + tick)
/ 2;
        }
12
13
14
        private static void sleep (long
sleepTime) throws InterruptedException
15
        {
16
            if(sleepTime < 2)</pre>
17
                Thread.yield();
            else
18
19
                Thread.sleep(sleepTime);
        }
20
21
```

```
22
       private static void work (long p
eriod) {
23
            long start = System.currentT
imeMillis();
24
            for(;;){
25
                Math.sin(1);
26
                if(System.currentTimeMil
lis() - start >= period)
27
                    break;
28
            }
        }
29
30 }
```

多核CPU上测试时要注意关掉一个CPU:
